## ANCILLARIES

**Trim C320:** The latest synthetic cutting fluid from Master Chemical Europe, Trim C320, has been formulated for the high-speed turning, drilling, tapping and grinding of aluminium, steel, cast iron and copper alloys. The water-clear fluid has excellent lubricity and its 'down-the-hole' machining performance is said to be comparable to that of premium soluble oils. Inherently bio-stable (without the use of conventional biocides), Trim C320 contains no nitrides, chlorine, sulphur or phenol and is virtually mist and odour free. It also offers exceptionally long sump life and produces little or no foaming at operating temperatures in excess of 27 deg C.
