

How to send samples to MFS

Please use the following steps to send samples to Master Fluid Solutions' Technical Services Laboratory for analysis:

1. Contact Master Fluid Solutions' Techline, Service Engineer, District Sales Manager, or your Distributor to determine if a sample is needed for analysis.
2. Using a clean, dry bottle, collect one pint of fluid from a running coolant nozzle or hose.
3. Using Avery 5163 (laser) or 8133 (ink jet) labels, print off a sheet of labels.
(If label stock is not available use standard paper to print label, cut out label, and affix to the bottle with clear tape)
4. Using neat, hand-written print, fill out all information on the label.
5. Affix label to sample bottles.
6. Ship to:

Master Fluid Solutions
Attn: Technical Services Lab
501 West Boundary Street
Perrysburg, OH 43551-1200

Depending on the analysis requested, samples should be processed and results released within three days of receipt.
