

Innovative Super-Fast Dewatering Fluid with Added Corrosion Protection

WEDOLiT AS 3040 is a dewatering fluid with corrosion protection properties that uses surface-active substances to displace both water and emulsions from metal surfaces quickly. Using it as an immersion bath at room temperature, also means that even highly complex shapes and hollow parts such as tubes and pipes can be effectively dewatered.

Choose WEDOLiT AS 3040

- > Due to its strong dewatering effect, residues of flushing water or water containing fluids including emulsions and synthetic coolants are removed from the metal surface
- > After evaporation of the solvent, a thin non-adhesive protective film remains on the surface, which offers corrosion protection for short to medium-term storage
- > The fast dewatering process increases productivity and offers the possibility for faster packaging
- > Water/ emulsions that enter the bath will settle on the bottom of the tank and can be drained off
- > Development of a clear phase boundary will form between the water and product, without forming an emulsion phase
- > Ideal for work pieces that are additionally packaged with VCI foils
- > Excellent bath life
- > Flash point: > 60°C
- > Dewatering effect: < 5 seconds
- > Humidity test: 7 cycles
- > Salt spray performance: < 1 hour
